Milan can surely be considered one of the cradles of transcatheter valve interventions because of some outstanding surgical and interventional operators, inventors, and scientists.

The MVSIC course seeks in a very practical way to show modern transcatheter valve interventions.

Both, live cases and case reviews will increase the participants knowledge on endovascular valve procedures.

The MVSIC heart-team will discuss which strategy is the best for the presented patients: transcatheter or surgical.

The most recent technical developments will be shown to guarantee interactive discussions with the participating doctors.
