Course Objective. The 4th edition of the course has three components, as in the previous editions. The first part focuses on the diagnostic and counselling challenges offered by borderline cerebral and cardiac findings. The second part addresses the diagnostic difficulties encountered in anomalies rarely discussed in training courses, such as facial, renal and segmental spinal malformations. The third part deals – as in the previous courses – with feto-maternal important conditions, which in the present edition are represented by thyroid dysfunction and hyperemesis gravidarum and their possible ominous consequence on the fetus. Live demos, entertaining debates & voting sessions are used to enhance an effective discussion.
